NETFORTRIS TOTAL CONTROL FIREWALL OPTIONS

Powered by **FORTINET**

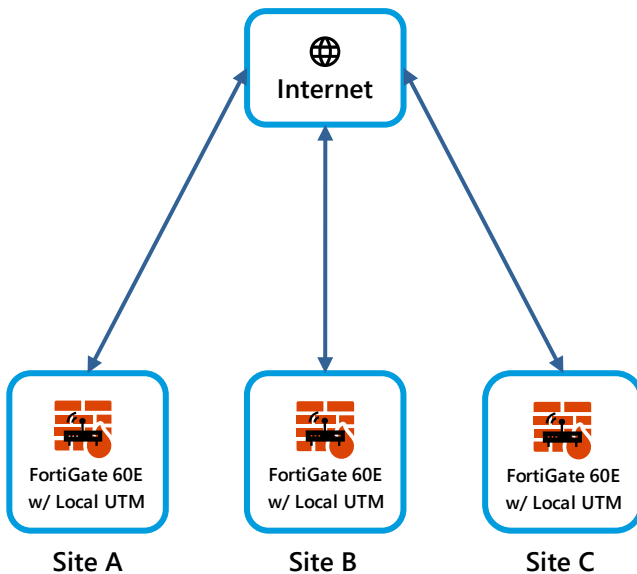

TCF – Cloud

1. UTM Firewall exists in the NetFortris Cloud and can be applied to multiple locations within cloud virtual domains.
2. The NetFortris Cloud Firewall provides security analysis for all inbound and outbound Internet traffic at one or several geographically diverse points.
3. Great for multi-site customers who want a centralized solution for Internet across all sites.
4. Profiles set up and managed by NetFortris. Co-management access available to qualified customers.
5. FortiGate security appliance on site provides secure connectivity to the cloud.

TCF – Premises

1. UTM services are applied on Edge device located at the customer premises rather than in the cloud and can provide for local Internet traffic handling.
2. The NetFortris Cloud Firewall provides security analysis for all inbound and outbound Internet traffic locally at each site, where a UTM license is applied.
3. Great for single site customers, or customers with fewer than 5 locations.
4. Profiles are set up and managed by NetFortris. Co-management access available to qualified customers.
5. FortiGate security appliance on site provides secure connectivity directly to the Internet.

TOTAL CONTROL FIREWALL SERVICES

Unified Threat Management (UTM)

Antispam

Detects unwanted and often malicious email with global spam filtering that uses sender IP reputation and spam signatures.

Web Filtering

Rates over 250 million websites and delivers nearly 1.5 million new URL ratings every week. Websites are categorized into six major categories for fast control, and nearly 80 micro-categories for fine-tuned control.

Antivirus

Identifies and neutralizes hundreds of thousands of malware programs, using patented Fortinet Content Pattern Recognition Language technology.

Botnet + Domain Reputation

Blocks tens of thousands of botnet command & control communication attempts daily, by observing infected device communicating with a command & control server. FortiGuard's IP and domain address reputation tools block this communication, thereby neutralizing these threats.

Application Control + IPS Service

Blocks approximately 470,000 network intrusions. New IPS signatures are being created and uploaded to deployed devices every single day.

TOTAL CONTROL FIREWALL SERVICES

SSL VPN

Customers can elect to use their virtual firewall domain to establish SSL VPN access enabling remote users' secure entry into their company's network from abroad. SSL VPN access is enabled by utilizing an application that can be downloaded onto any user's device with access to the Internet.

SSL VPN Add-Ons

Two Factor Authentication

Standard & Advanced Active Directory LDAP Authentication (Single Sign-On)
