

MANAGED INTERNET BY NETFORTRIS: BUILT FOR YOUR BUSINESS

In our connected, cloud world, Internet access is a must-have for all businesses, but at NetFortris we understand it's not one size fits all. We build a customized solution to provide the best connectivity, security and reliability options for your organization's size, application and budget.

MANAGE YOUR BUSINESS, NOT YOUR INTERNET

We not only set up your connection, but our network specialists also manage and maintain it, so it just works and you can focus on your business.

✓
**Unified Billing
Across Locations**

DEPLOYMENTS FOR EVERY ENVIRONMENT

One site, 100 sites, remote workers or branch locations? Whatever your footprint, Managed Internet by NetFortris can be deployed in several ways.

Dedicated Internet Access (DIA)

For cost-effective connectivity at branch locations, trust NetFortris to find the best local access for your business. Direct Internet links can be provided in a variety of sizes and technologies, including wireless.

Carrier-Grade MPLS Wide Area Network

NetFortris' MPLS reduces total cost of ownership by consolidating voice, video and data traffic onto a single, highly secure network. Plus, we continuously monitor the health of network circuits and devices.

Software-Defined Wide Area Networking (SD-WAN)

SD-WAN by NetFortris is a fully managed network solution that aggregates and optimizes all bandwidth resources, regardless of access type and size, giving you uncompromised security, privacy and control.

Total Control VPN

Our Total Control VPN reduces system complexity and provides a secure and cost-effective, private network solution for IT departments to meet the increasing demands for secure access without increasing their budgets.

CONNECTIONS FOR ANY APPLICATION

Managed Internet by NetFortris offers critical connectivity to suit your application, use case and budget. Plus, we can mix and match access types to meet varying needs by location, including deploying multiple circuits to achieve 100% uptime with robust failover.

DSL	Fiber	Ethernet over Copper
Cable	T1	Wireless 4G LTE

NETWORK BACKUP SOLUTIONS

Network backup can provide vital safeguards and peace of mind for companies who rely on connectivity to run their operations. Managed Internet by NetFortris can provide various levels of backup with many different configurations to meet the needs of every business.

Minimize/Eliminate Downtime

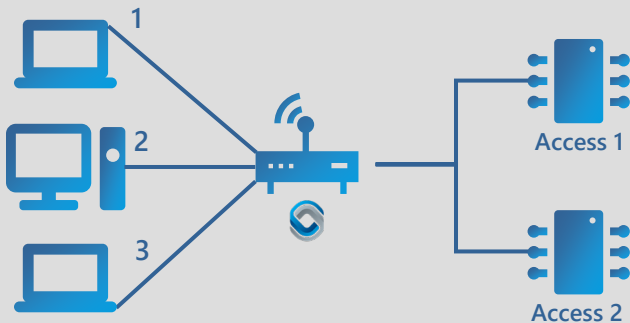

Save Money from Costly Downtime

Automated Failover

Multiple Technologies Available

CIRCUIT CONFIGURATIONS

Active/Active

Managed traffic runs over two circuits simultaneously. If one goes down, all traffic will be sent over the remaining circuit.

Active/Passive

All managed traffic runs over a primary circuit. A secondary circuit is ready in case you experience a loss in service.
