

SIP TRUNKING BY NETFORTRIS – MAXIMIZE THE VALUE OF YOUR EXISTING PHONE SYSTEM

Thinking about moving to a cloud-based business phone system to get more modern functionality? Not quite ready to replace your existing phone system? No worries. There's another option - SIP Trunking by NetFortris.

ENHANCED SERVICES & SAVINGS

With SIP Trunking, you can add new IP capabilities, extending the life of your phone system and taking the first step toward cloud communications. Plus, you can save money! It may sound too good to be true, but we've helped thousands of businesses do just that with SIP Trunking by NetFortris. Here's how:

- 1** We deploy an ATA or voice gateway at your location to connect your existing Private Branch Exchange (PBX) or Plain Old Telephone Service (POTS) block to the Internet.
- 2** We use Session Initiation Protocol (SIP) to define call paths, which replace expensive analog lines and PRIs/T1s and deliver advanced communications functionality.

A SIMPLE SOLUTION FOR COMPLEX COMMUNICATIONS

SIP Trunking is easy to implement, lowers your monthly expenses and opens the door to IP-based communications, enabling you to compete more effectively in the post-pandemic world of remote and hybrid work.

With SIP Trunking, you can easily stay connected with call forwarding and alternate routing.

BENEFITS OF SIP TRUNKING BY NETFORTRIS

Unlike most SD-WAN providers, NetFortris is not a reseller. We can deliver the following advantages and flexibility through our own international SD-WAN backbone.

Reduce Phone Costs

SIP Trunking replaces traditional POTS lines or PRI/T1 trunks, which can save up to 70% on your company's monthly phone bill.

Unlock UC Features

SIP support for call data and multimedia gives you access to advanced UC features like call forwarding, auto attendant, simultaneous ringing and more.

Enjoy Unlimited Calling

Our SIP Trunking voice packages include options for unlimited local and long-distance minutes. And internal inter-office calling is always free.

Decrease Downtime

Never miss a call! Send calls to another number with call forwarding or enhanced alternative routing or enable bursting for calling over your plan.

Scale Cost-effectively

Unlike traditional PRI trunks, which are sold in increments of 23 channels, our SIP trunks are priced by call path, with optional bursting, so you buy only what you need.

Control Calling

Easily manage call functionality like call forwarding, simultaneous or sequential ringing and Do Not Disturb through our intuitive web-based portal.

APPLIANCES FOR EVERY APPLICATION

SIP Trunking works not only for IP-enabled PBXs but also as a cost-effective POTS replacement with the addition of simple appliances at your premises.

VOICE GATEWAYS

For offices with a PBX and average call volumes: Voice gateways supporting 1PRI, E1/T1

For offices or call centers with a PBX and high call volumes: Voice gateways supporting 2 PRI, E1/T1

ANALOG TELEPHONE ADAPTERS

For businesses with POTS lines: ATAs with 2, 4 or 8 ports

For larger offices with POTS lines: Voice gateways with 16, 24 or 48 ports
