

TOTAL CONTROL VPN – PROTECT YOUR NETWORK & YOUR BUDGET

Whether your company is large or small, its footprint extends beyond corporate headquarters to branch locations and other remote office environments.

Your top priority is securely connecting remote sites and workers to your company's data and applications.

Unfortunately, traditional approaches can be complicated and expensive, so NetFortris found a better way.

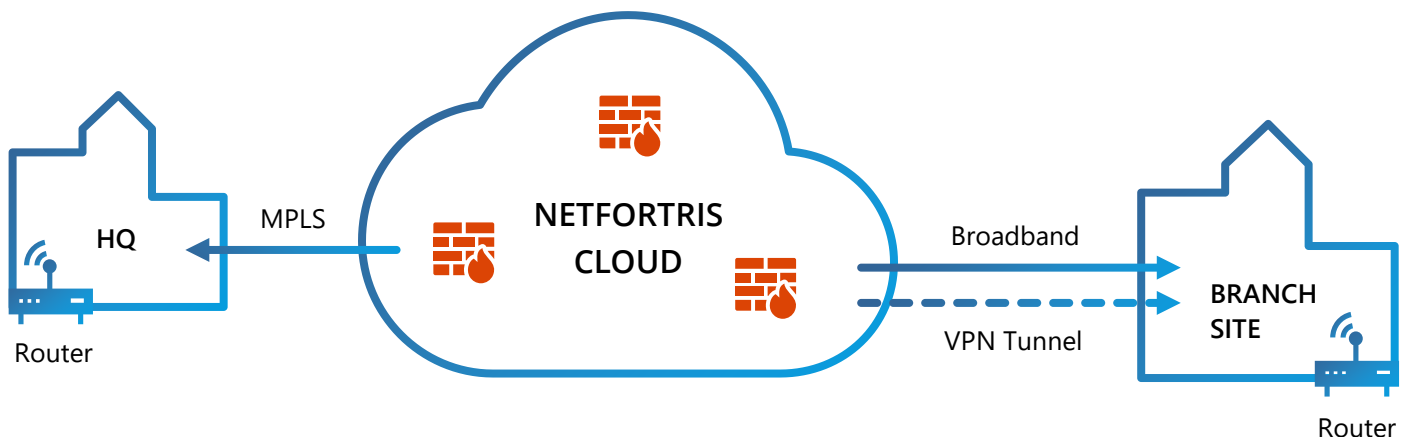

ALL-IN-ONE VIRTUAL PRIVATE NETWORK SOLUTION

NetFortris Total Control VPN provides a simple and cost-effective solution for securing corporate access by trading the complexity and overhead of traditional private networking with an all-in-one solution.

NetFortris Total Control VPN is a managed service that includes:

- ✓ Router
- ✓ IPSEC VPN Tunnel
- ✓ Virtual Domain
- ✓ Configuration
- ✓ Management
- ✓ 24/7/365 Support

SECURE NETWORK ACCESS FOR YOUR HYBRID WORKFORCE

CONNECT WITH CONFIDENCE

Providing secure access to corporate resources can be challenging, especially with remote workers and business partners connecting to your network from untrusted and semi-trusted devices. NetFortris Total Control VPN removes the complexity by managing everything for you so you can connect with confidence.

Quick to Deploy

Install over existing broadband or let us source connections for you. Either way, you can deploy in a fraction of the time compared to traditional layer 2 private circuits.

Cost-Effective

Save money by using low-cost broadband Internet connections and eliminating the need for in-house experts, added equipment and ongoing staff support.

Easy to Use

With clientless remote access, your users only need an internet connection to safely and securely access any approved network resources.

24/7/365 Monitoring

Our support experts are here to answer your support calls and proactively monitor your VPN around the clock from our carrier-class Network Operations Center (NOC).

Maintenance Free

With our fully managed service there's no equipment or software to manage or support. And there are no accounts to create or licenses to purchase.

Hardened Security

Keep your data secure with high-level encryption, including AES-256, the gold standard for VPN block ciphers, and SHA-256 to protect data integrity in transit.

Got MPLS?

No problem. NetFortris Total Control VPN can directly connect your branches or feed into traditional MPLS sites for hybrid deployments.

Need Firewall?

We got you! NetFortris Total Control Firewall secures inbound and outbound traffic at your branch offices with optional SSL VPN access.
