

# SIP TRUNKING BY NETFORTRIS PRICING / DATASHEET GUIDE

## ENHANCED SERVICES & SAVINGS

With SIP Trunking, you can add new IP capabilities, extending the life of your phone system and taking the first step toward cloud communications. Plus, you can save money! It may sound too good to be true, but we've helped thousands of businesses do just that with SIP Trunking by NetFortris. Here's how:

- 1** We deploy an ATA or voice gateway at your location to connect your existing Private Branch Exchange (PBX) or Plain Old Telephone Service (POTS) block to the Internet.
- 2** We use Session Initiation Protocol (SIP) to define call paths, which replace expensive analog lines and PRIs/T1s and deliver advanced communications functionality.

## EASY TO USE & EASY TO BUY

SIP Trunking is as simple to order and provisions as it is to use.
