

MAXIMIZE THE VALUE OF YOUR EXISTING PHONE SYSTEM

SIP Trunking

Thinking about moving to a cloud-based business phone system to get more modern functionality? Not quite ready to replace your existing phone system? No worries. There's another option — SIP Trunking.

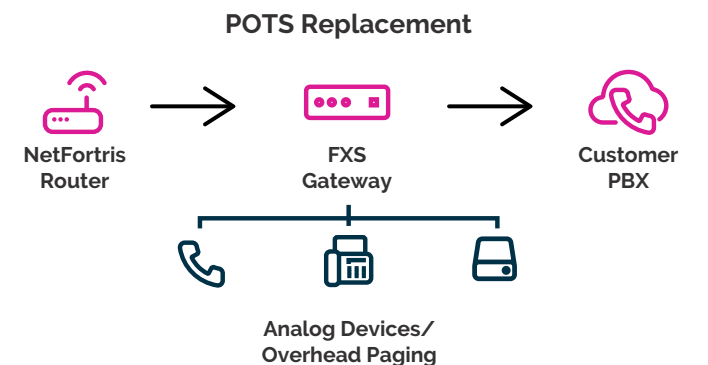

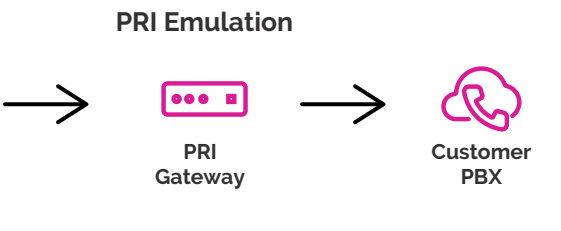

It may sound too good to be true, but we've helped thousands of businesses do just that with SIP Trunking. Here's how:

- 1 SWAP PRICEY LINES FOR INTERNET LINKS**
 First, we deploy an ATA or voice gateway at your location to connect your existing Private Branch Exchange (PBX) or Plain Old Telephone Service (POTS) block to the Internet, replacing expensive analog lines and PRIs/T1s.
- 2 ENABLE FEATURE-RICH CALLING**
 Then, we use Session Initiation Protocol (SIP) to define call paths over the Internet connections and deliver advanced communications functionality, such as call forwarding, auto attendant and simultaneous ringing.

PRI OR POTS REPLACEMENT

SIP Trunking works not only for IP-enabled PBXs but also as a cost-effective POTS replacement with the addition of simple appliances — analog telephone adapters (ATAs) or voice gateways — installed at your premises

- For businesses with POTS lines:**
 ATAs with 2, 4 or 8 ports
- For offices/call centers with PBX & high call volumes:**
 Voice gateways supporting 2 PRI, E1/T1

- For businesses with POTS lines:**
 ATAs with 2, 4 or 8 ports
- For larger offices with POTS lines:**
 Voice gateways with 16, 24 or 48 ports

Benefits of SIP Trunking

Unlike most SD-WAN providers, NetFortris is not a reseller. We can deliver the following advantages and flexibility through our own international SD-WAN backbone.

➤ **REDUCE PHONE COSTS**

SIP Trunking replaces traditional POTS lines or PRI/T1 trunks, which can save up to 70% on your company's monthly phone bill.

➤ **ENJOY UNLIMITED CALLING**

Our SIP Trunking voice packages include options for unlimited local and long-distance minutes. And internal interoffice calling is always free.

➤ **SCALE COST-EFFECTIVELY**

Unlike traditional PRI trunks, which are sold in increments of 23 channels, our SIP trunks are priced by call path, with optional bursting, so you buy only what you need.

➤ **UNLOCK UC FEATURES**

SIP support for call data and multimedia gives you access to advanced UC features like call forwarding, do not disturb, simultaneous ringing and more.

➤ **DECREASE DOWNTIME**

Never miss a call! Send calls to another number with call forwarding or enhanced alternative routing or enable bursting for calling over your plan.

➤ **CONTROL CALLING**

Easily manage call functionality like call forwarding, simultaneous or sequential ringing and Do Not Disturb through our intuitive web-based portal.

➤ **IMPROVE RELIABILITY**

For no extra charge, we connect SIP trunks through georedundant Session Border Controllers (SBCs) so your voice connections are never down.

➤ **INCREASE REDUNDANCY**

SIP Trunking runs over your Internet connections, including any backup terrestrial or wireless Internet circuits, so your phone system stays up and running.

➤ **BURST ON BUDGET**

Unlike other providers that charge per-minute rates for bursting over plan, our predictable and affordable monthly flat-rate per call path means no billing surprises.

EASY TO USE & EASY TO BUY

SIP Trunking is as simple to order and provision as it is to use:
